

A Story about Coronavirus in South Australia.

Coronavirus is also called COVID or COVID-19.
It is a virus that can be passed from person to person.

Coronavirus can make people feel sick.

People that have Coronavirus might get a cough, sore throat, shortness of breath or a fever. Some people can get very sick and need to go to hospital.

cough

sore throat

short of
breath

feel hot

It is important that if you feel sick, that you get tested for Coronavirus.

I can help stop the spread of germs by washing my hands with soap and water for 20 seconds. If I go out of the house, I can use Hand Sanitizer before I touch things.

If you leave your home and you cannot stay 1.5m away from other people, it is a smart idea to wear a mask.

When you wear a mask, it should cover the nose, mouth and chin.

Masks helps to keep everyone safe.

When my parents go to Autism SA they might wear a mask.
They are still my parents just with a mask on.

When someone from Autism SA comes to see me, they might be wearing a mask too.

This is okay.

The rules change. My family and support workers will help me to stay safe and help me to follow the rules.

If we all follow the rules, it helps to keep everyone safe.

For more information on COVID visit the SA Health Website:
